

Thank you for choosing Schneider Electric's EcoStruxure IT Data Center Expert Virtual Machine Software.

The DCE Virtual Machine software has a monitoring **limit of five nodes** (devices and surveillance cameras) and will operate in trial mode for **90 days**.

During this time, some features will be temporarily restricted, such as server upgrades, device firmware updates, and video surveillance clip retrieval. Video clips will continue to be recorded.

You can purchase a subscription license on the [mySchneider Software Management](#) website to upgrade to a production version to monitor additional device nodes and activate supported applications, or to migrate from a server hardware version to a virtual appliance.

For more information, see the [Data Center Expert subscription license FAQ](#)

[About mySchneider Software Management](#)

The Data Center Expert 9.0.0 server is available as a virtual appliance, supported on VMware ESXi 6.7 or newer and Hyper-V on Windows server 2019 and 2022.

[Download](#) the .ova file or the .vhdx file and load it into a supported virtualization platform.

In Data Center Expert 8.1.0 and newer, the Data Center Expert Virtual Appliance OVA is built on VMware ESXi 6.7. Only E1000E and VMXNET3 network adapters are supported.

VMware ESXi 4.1.0 was used as the reference virtualization platform in previous versions and is the first supported virtualization platform.

Although it may function properly on any virtualization platform that supports these formats or has an appropriate converter utility, only VMware ESXi and on-premises Hyper-V have been tested and are supported.

Please reference the [product documentation](#) prior to using the Data Center Expert Virtual Machine Trial Software.
