Alienware Advanced Gaming Keyboard – AW568

Takeover is complete.

Alienware's Advanced Gaming Keyboard delivers a premium gaming experience at an affordable value. Blending gamer-friendly design features and intuitive software, the responsive mechanical keyboard features AlienFX lighting, five programmable macro key functions and iconic Alienware design.

Key Features for AW568

Alienware Design & AlienFX Lighting:

- The Iconic Alienware Design will elevate your game with imposing style and precise form.
- Customizable AlienFX™ lighting (with 2 zones) provides a personalized, dynamic look to make your accessories reflect your style and deliver deeper immersion in the game with in-game lighting effects.

Mechanical Keyboard (brown switches)

- Mechanical switches offer more precise, responsive, and consistent keystrokes
- Brown switches are a perfect entry point for mechanical keys that can satisfy wider range of gamers (beginner to expert) and gaming types from beginner to expert. They are well known for good ergonomic characteristics with good tactile feedback & low actuation force but low click noise.

N-Key Rollover and anti ghosting (all keys)

- N-Key Rollover allows each key to be scanned independently so that every key press is registered regardless of how many other keys are pressed at the same time.
- Don't miss any action and anti-ghosting - Use as many keys simultaneously as needed while gaming

May 2017

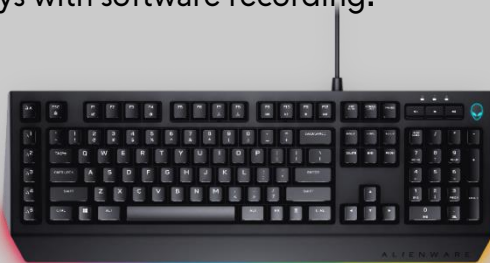

Other Features

Alienware Control Center (software)

- Be in control of your keyboard with the Alienware Control Center: Increase your gaming level by adjusting your specs and record your own macros. Personalize your keyboard by changing the lighting to match your mood.
- Install and update the software via Cloud push software installation.

5 Macro Key functions

- Save time and conquer your opponent by creating up to 5 combinations of moves accessible on dedicated macro keys with software recording.
