

DELIVERING VALUE IN THREE KEY AREAS

Risk management

- Protect data
- Reduce PC losses

IT operations

- Cost-effective fleet management
- Reduce tickets and PC remediations

User experience

- Quickly locate lost PCs
- Reduce stress and anxiety

HP Wolf Protect and Trace

Find, Lock and Erase for
your HP PCs made easy

Solution overview

Today's hybrid working world has made managing and securing a fleet of PCs harder than ever. HP Protect and Trace¹ helps IT to manage and protect remote PCs, at low acquisition and operational cost. The solution helps organisations improve asset management, gain tighter control of their data and improve user experience.

How it works

HP Protect and Trace uses a persistent Windows agent and internet connectivity to allow IT to find, lock and erase PCs almost anywhere.

Locate a PC in real
time

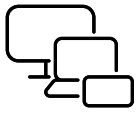

Lock a PC to prevent
unauthorised access

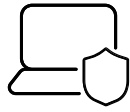

Erase a PC's primary
disk to keep data safe

Driving business outcomes across finance, operations and security

Asset management

Maintain tighter control over PC fleet to decrease cost, including for temporary staff.

Data security

Secure data against unauthorised access.

Financial risk management

Decrease risk of equipment loss for as-a-service or leasing.

Find my PC

Assist users whose PC has been lost or stolen.

Device life cycle sustainability

Manage devices from deployment to retirement, re-issue or recycle.

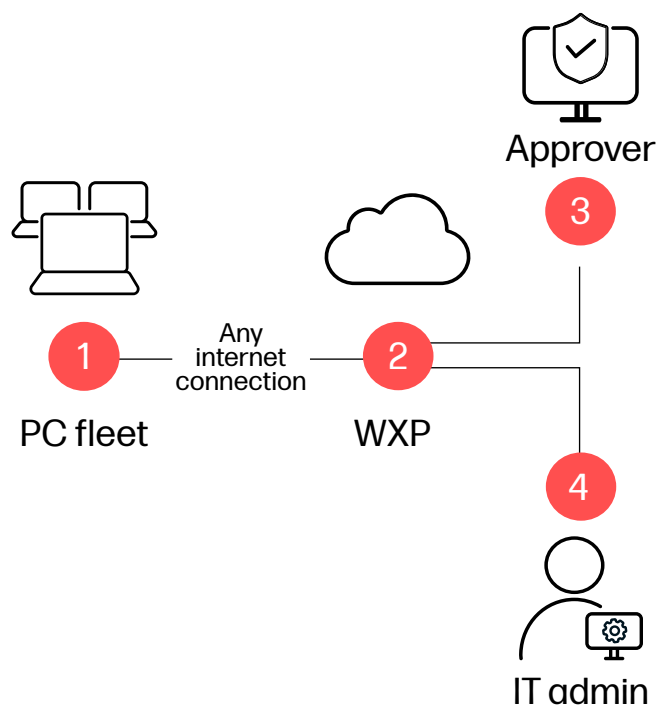

Audit & compliance

Efficiently satisfy data and asset management controls.

Solution architecture

- 1 Supported HP PCs**
- 2 Workforce Experience Platform (WXP)**
for centralised management
- 3 Approver application**
for secure approval of sensitive Lock & Erase commands
- 4 IT admin**
System administration:
IT staff or outsourced partner

Unified management streamlines operations

Protect and Trace with Wolf Connect shares the HP Workforce Experience Platform with various HP Support and Digital Services², providing a single console for unified fleet management.

Advanced security features

BIOS-level protection

- Unlike other solutions, Protect and Trace executes Lock and Erase functions at the BIOS level.
- This provides better solution resiliency and data security than the OS-level approach used by alternative solutions.

Separation of duties

- The included Approver application provides enhanced security and availability.
- Lock and Erase commands are requested by the IT Administrator but must be approved by one or more approver staff.
- Advanced threshold cryptography is used for added protection.
- By splitting responsibilities and key material across multiple devices and staff, the risk of accidental or malicious compromise is vastly reduced.

Licensing and deployment options

HP Protect and Trace can be purchased with a new HP PC or deployed on an existing PC. No hardware is required other than the supported PC.

Licence terms: 1, 2, 3, 4 and 5 years. Licences are loaded into the customer WXP, and then assigned to PCs by WXP policy.

A PC fleet with a mix of Protect and Trace and Protect and Trace with Wolf Connect PCs is supported in the same WXP instance, with the common operational model.

HP Protect and Trace leverages the HP Insights agent used by various HP services and the WXP platform, streamlining deployment and operations.

Taking fleet management to the next level with Wolf Connect

HP Protect and Trace works over any Wi-Fi®/internet connection.³

But for the highest level of assurance, consider Protect and Trace with Wolf Connect, which works over cellular communications, even if the target PC is off!

You can mix Wi-Fi and Wolf Connect target PCs in a single network, with an identical operational model.

Protect and Trace

Wi-Fi/internet only

Protect and Trace with Wolf Connect

Global cellular or Wi-Fi/internet

Visit the following links to learn more about additional [HP Protect and Trace Technical Requirements](#) and the [Terms of Service](#).

1. HP Protect and Trace is compatible with select HP 400, 600, 800, 1000 series, Windows-based laptops, select 800 desktops and Z1 G8 workstations; requires devices to be powered on and connected to the internet; and is available in 1-5 year licences from HP or your authorised HP representative. See HP Wolf EULA for complete details. HP Protect and Trace requires HP Insights agent download, available at <https://admin.hp.com>. The HP Insights agent is a telemetry and analytics app that provides critical data around devices and applications and is ISO27001, ISO27701, ISO27017 and SOC 2 Type 2 certified for Information Security. Purchase of any HP Insights agent-enabled service necessitates enabling software to run on each device. HP Services Scan is provided through Windows Update on select HP hardware and will check entitlement on each hardware device to determine whether an enabled service has been purchased and download applicable software automatically. For full system requirements and disabling instructions, please visit <http://www.hpdaas.com/requirements>.

2. HP P&T with WC may be managed with the Wolf Security Controller or HP WXP platform, not both.

3. See HP Protect and Trace with Wolf Connect data sheet [here](#).
