A complete modern authentication solution
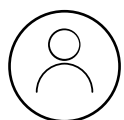

HP Authentication Suite

Protecting your endpoints in a new era of work

New ways of working have led to a shift in how security leaders think about protection. Protecting the network is no longer sufficient as the number of end-user devices outside of the network grows. Modern security approaches include protecting individual devices—wherever they are.

Printers handle confidential document data, making them one of the most important endpoints to protect. A Zero Trust approach to security and better solutions for secured access are needed to provide adequate protection for endpoints. Look for an integrated solution that provides the highest level of protection while maintaining efficiency and productivity.

Meet the HP Authentication Suite

HP Authentication Suite is a toolkit comprised of an enterprise authentication solution and a companion mobile app providing unparalleled access control and a consistent authentication experience across devices.

HP Authentication Manager

Bringing client-controlled identity management to print devices.

HP Secure Authentication

Enabling a modern authentication experience through a mobile authenticator app.

Enable Multi-Factor Authentication (MFA)

Reduce RFID card dependency

Remain secure and compliant in Zero Trust environments

HP Authentication Manager

Experience a flexible way to deploy device-based authentication without requiring users to authenticate through HP ID cloud service. No access cards or readers to be maintained. No passwords or PINs to be forgotten or compromised.

With HP Authentication Manager, organizations can link to their existing identity management system (e.g., Azure Active Directory), deploy an authenticating application to the printer through the HP Workpath environment, and authenticate users with a range of MFA solutions.

Seamlessly integrate with your identity management system

Deliver against security and compliance expectations

Provide a consistent authentication experience

HP Authentication Manager offers:

1 FLEXIBLE IMPLEMENTATION

2 DATA PRIVACY AND CONTROL

3 SECURE COMMUNICATIONS

4 SIMPLE SETUP

HP Secure Authentication

Support a reader-less flow without complexity. Available for Android or iOS devices, this easy-to-use mobile app facilitates user logins, eliminating the need for proximity cards and expensive card readers.

HP Secure Authentication allows organizations to easily enable MFA and provide a consistent experience that won't slow users down. They can onboard themselves with minimal support, and their data remains under the control of your organization.

Enables MFA from a single mobile app

Complements or replaces physical token authentication

Compatible with a reader-less strategy

HP Secure Authentication offers:

1. READER-LESS FLOW

2. SELF-SERVICE EXPERIENCE

3. FLEXIBLE MFA

4. IOS AND ANDROID ACCESSIBILITY

Workforce Solutions

Bring modern authentication to your print devices

HP Authentication Suite lets you embrace modern authentication with a true, single sign-on experience that meets employee expectations and satisfies compliance and privacy standards.

1 MODERNIZE IDENTITY MANAGEMENT AND SECURE ACCESS
Embrace mobile-driven authentication flows, eliminating the need for RFID cards or readers while helping to provide a secure and convenient experience for users.

2 STREAMLINE AUTHENTICATION EXPERIENCES
Implement a consistent authentication policy and robust security controls for a unified experience for the user across PCs and print devices.

3 MAINTAIN DATA PRIVACY, CONTROL, AND COMPLIANCE
Take control of authentication at the device level while enhancing your compliance posture with the flexibility to self-host the platform.

Get started

Let us help you extend modern authentication beyond the PC, while keeping your endpoints consistently and securely protected, and under your control.
