N/A

### Item Model Number

8121203410

### Manufacturer

Swissgear

### Product Name

8121 USB ScanSmart Gaming Laptop Backpack

### Product Color

Black

### Product Description

Upgrade your game and avoid the lag when you're on the move with the Swissgear 8121 USB ScanSmart Gaming Laptop Backpack. This ultimate gaming backpack is specially made to transport your gaming components and accessories safely, securely, and hassle-free. Its clever ScanSmart design lets you keep your gaming laptop/console stowed, even through TSA checkpoints, while an exterior USB port gives you access to power up devices wherever you are. Accessible from a wraparound zipper on the back of the backpack, a deep, padded compartment with securing strap protects gaming laptops up to 17" or standard, full-sized gaming consoles, and a separate large padded pocket protects tablets from bumps and dings. A second zipper opens to the large main compartment that features numerous specialty storage options, including a padded, felt-lined keyboard pocket with elastic securing strap made to hold standard sized keyboards. A mouse pocket and a handheld gaming console pocket are also both felt-lined to prevent scratches. A large, zippered mesh bag is perfect for cables, a pocket with hook and loop closure holds adapters, and a hanging loop and side elastic loops fasten down other gear and essentials.

The front of this clever backpack features a deep, fleece-lined, zippered pocket that is molded to hold gaming headphones perfectly and a large, padded accessory pocket with a padded mesh slip pocket for protection of handheld devices. A detachable key ring, front carabiner, and webbing loops let you attach extra gear, and light-reflective material on the front of the backpack offers added safety. Other convenience features include an external, zippered, insulated pocket, perfect for storing a cold beverage and a padded, zippered side pocket where you can tuck away controllers and accessories. Hit the road or the tarmac comfortably with ergonomically contoured, padded shoulder straps that feature integrated D rings, breathable mesh fabric, shock absorbers, thumb ring pulls, and an adjustable sternum strap. A padded, airflow back panel provides superior back ventilation and added support. Other carrying options include a wire-reinforced, padded top carry handle and an add-a-bag panel that

fits over the extension handle of rolling luggage for secure stacking. Constructed with 1680D Ballistic Fabric and coated polyester that wipes clean, this backpack stays looking and performing well through all the action.

### Product Features
