## **OVERVIEW**

The UCS C240 M5 LFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 2U form factor with the addition of the Intel® Xeon® Processor Scalable Family, 24 DIMM slots for 2666 MHz DDR4 DIMMs and capacity points up to 128GB, up to 6 PCI Express (PCIe) 3.0 slots, and up to 12 front-facing internal LFF drives. The C240 M5 LFF server also includes one dedicated internal slot for a 12G SAS storage controller card.

The C240 M5 server includes a dedicated modular LAN on motherboard (mLOM) slot for installation of a Cisco Virtual Interface Card (VIC) or third-party network interface card (NIC) without consuming a PCI slot, in addition to 2 x 10 Intel x550 10Gbase-T embedded (on the motherboard) LOM ports.

The Cisco UCS C240 M5 server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

### Table 4 Available Intel CPUs

Notes:

1. Only CPU PIDs ending in "M" support 1.5 TB/socket of memory, per Intel CPU spec. All other CPU PIDs support 768 GB/socket memory.

2. UPI = Ultra Path Interconnect. 2-socket servers support only 2 UPI performance, even if the CPU supports 3 UPI.

3. If higher or lower speed DIMMs are selected than what is shown in the table for a given CPU, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.

### **Approved Configurations**

- (1) 1-CPU configurations:
  - Select any one CPU listed in *Table 4 on page 16*.
- (2) 2-CPU Configurations:
  - Select two identical CPUs from any one of the rows of *Table 4 on page 16*.

Caveats

- You can select either one processor or two identical processors.
- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:

- DIMMs
  - Clock speed: 2666 MHz
  - Ranks per DIMM: 1, 2, 4, or 8
  - Operational voltage: 1.2 V
  - Registered ECC DDR4 DIMMs (RDIMMs), load-reduced DIMMs (LRDIMMs), or through silicon via (TSV) DIMMs
- Memory is organized with six memory channels per CPU, with up to two DIMMs per channel, as shown in *Figure 4*.

#### Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in *Table 5*.

NOTE: When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two DIMMs. If a memory read from the primary DIMM returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the secondary DIMM in the mirrored pair. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated DIMMs provides data.

Select the memory mirroring option (N01-MMIRROR) as shown in *Table 5 on page 20*.

**NOTE:** System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

### STEP 5 SELECT RAID CONTROLLERS

### RAID Controller Options (internal HDD/SSD support)

### Cisco 12G SAS RAID Controller

You can choose a Cisco 12G SAS RAID controller, which supports up to 14 drives and plugs into the dedicated RAID controller card slot. This RAID controller supports RAID 0, 1, 5, 6, 10, 50, 60 and JBOD mode.

**NOTE:** The number of RAID groups (virtual drives) supported per RAID controller is as follows:

Embedded RAID = 8

■ Cisco 12G SAS RAID controller = 64

### SAS HBA (internal HDD/SSD/JBOD support)

You can choose a SAS HBA for JBOD or pass-through mode support:

### **RAID Volumes and Groups**

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For the Cisco 12G SAS RAID controller upgrade:
  - Use either all SAS HDDs, or all SAS SSDs, or all SATA SSDs in each RAID volume

#### Select Controller Options

Select as follows:

- For the 12-drive backplane system, select one of the following:
  - Cisco 12G SAS RAID controller with 2 GB FBWC, or
  - Cisco 12G SAS HBA

#### Table 6 Hardware Controller Options

Product ID (PID)	PID Description

- ESXi/VMware is not supported

UEFI Mode must be used when booting from 4K sector size drives, legacy mode is not supported. Ensure that 4K sector size and 512 byte sector size drives are not mixed in the same RAID volume.

- 2. If you choose one or two SFF NVMe drives, drive slots 1 and 2 at the front of the chassis are reserved for these drives (see *Figure 2 on page 6* for drive slot numbering).
- 3. Targeted for write centric IO applications. Supports endurance of 10 or 3 DWPD (drive writes per day). Target applications are caching, online transaction processing (OLTP), data warehousing, and virtual desktop infrastructure (VDI).
- 4. Targeted for write centric IO applications. Supports endurance of 10 or 3 DWPD (drive writes per day). Target applications are boot, streaming media, and collaboration.
- 5. For all self-encrypting drives (SED), standalone Management (CIMC) is supported for configuring and managing local keys (UCSM is not supported). For now, SED drives are managed with local key management only. In the future, third-party key management will be supported. #### Caveats

- For 1-CPU systems:
  - Only PCIe slots 1 and 2 on PCIe riser 1A are available for a 1-CPU system. All three slots (1, 2, and 3) on PCIe riser 1B are available for a 1-CPU system. Slots 1, 2, and 3 are to the left when looking at the rear of the server. Slot 1 is the bottom slot.
  - The PCIe slots on riser 2 are not supported on 1-CPU systems. The riser 2 slots are full-height PCIe slots 4, 5, and 6 (see *Figure 3 on page 7*). These are the slots on the right when looking at the rear of the server. Slot 4 is the bottom slot.
  - Only a single plug-in PCIe VIC card may be installed on a 1-CPU system, and it must be installed in slot 2 or 1 of riser 1 or 1B.
  - You can order an mLOM VIC card to be installed in the mLOM slot internal to the chassis and thus have two VIC cards in operation at the same time. If you order a GPU, it must be installed in slot 2, See *Table 10 on page 29* for the selection of plug-in and mLOM VIC cards. See also *Table 1 on page 9* and *DEATAILED VIEWS*, page 68 for the PCIe slot physical descriptions.

For 2-CPU systems:

- Six PCIe slots are available, three on PCIe riser 1 or riser 1B (PCIe slots 1, 2, and 3) and three on PCIe riser 2A, 2B or 2C (PCIe slots 4, 5, and 6).
- Two plug-in PCIe VIC cards can be installed in dual CPU systems, using slots 2 and 5. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot inside the chassis and thus have three VIC cards in operation at the same time. See *Table 10 on page 29* for the selection of plug-in and mLOM VIC cards. See also *Table 1 on page 9* and *DEATAILED VIEWS, page 68* for the PCIe slot physical descriptions.
- If GPUs are installed in slots 2 (Riser 1 or 1B) and 5 (Riser 2A or 2B), the NCSI capability automatically switches over to slots 1 (Riser 1 or 1B) and 4 (Riser 2A or

2B). Therefore, Cisco PCIe VICs can be installed in slots 1 and 4 if GPUs are installed in slots 2 and 5. If you order two GPUs, they must be installed in slots 2 and 5 and thus you will not be able to install VIC cards in those slots.

**NOTE:** UCSM managed servers are discoverable only if a VIC is installed in slot 2 or a VIC is installed in the MLOM slot. If you install two GPUs, they must be located in slots 2 and 5. Therefore, if two GPUs are installed, UCSM managed servers are discoverable only if you install a VIC in the MLOM slot.

- The server supports up to two PCIe Cisco VICs plus an MLOM VIC

However, single wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the MLOM slot, then slot 2, then slot 5 for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.

■ To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C240 M5 server, but are not sold on the Cisco price list, check the Hardware Compatibility List at this

### STEP 8 ORDER GPU CARDS (OPTIONAL)

Select GPU Options

The available GPU PCIe options are listed in *Table 11*.

Table 11 Available PCIe GPU Cards

Product ID (PID)	PID Description	Card Size

**CAUTION:** When using GPU cards, the maximum allowable operating temperature for NVIDIA P40 GPU is 32°C (89°F) and NVIDIA P100 GPU is 28°C (82°F)

**NOTE:** All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM

**NOTE:** All GPU cards require two CPUs and a minimum of two power supplies in the server. 1600W power supplies are recommended. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

http://ucspowercalc.cisco.com

#### Caveats

- NVIDIA M10 GPUs can support only less than 1 TB of total memory in the server. Do not install more than fourteen 64-GB DIMMs when using an NVIDIA GPU card in this server.
- GPUs cannot be mixed.
- Slot 5 on riser card 2 is the required slot for the first GPU.
- Slot 2 on riser card 1 is the secondary slot for a second GPU.

Refer to *Table 12* for the PCIe slot usage for the following PCIe cards installed in riser 1 and riser 2:

**NOTE:** UCSM managed servers are discoverable only if a PCIe VIC card is installed in slot 2 or an mLOM VIC card is installed in the mLOM slot. If you install two GPUs, they must be located in slots 2 and 5. Therefore, if two GPUs are installed, UCSM managed servers are discoverable only if you install a VIC in the MLOM slot.

**NOTE:** For more information on the riser card options, see *DEATAILED VIEWS*, *page* 68.

### STEP 9 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M5 C-Series servers. Each power supply is certified for high-efficiency operation and offers multiple power output options. This allows users to "right-size" based on server configuration, which improves power efficiency, lowers overall energy costs, and helps avoid stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

http://ucspowercalc.cisco.com

UCSC-PSU1-1600W	1600W power supply for C-Series servers

NOTE: In a server with two power supplies, both power supplies must be identical.

### **STEP 10 SELECT INPUT POWER CORD(s)**

Product ID (PID)	PID Description
UCSC-RAILB-M4	Ball Bearing Rail Kit for C220 and C240M4/M5 Rack Servers
UCSC-RAIL-NONE	No rail kit option

#### Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use *Table 16* to order a cable management arm.

#### Table 16 Cable Management Arm

Product ID (PID)	PID Description
UCSC-CMA-M4	Reversible CMA for ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the *Cisco UCS C240 M5 Installation and Service Guide* at this URL:

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/hw/C240M4/install/C240M4.html

**NOTE:** If you plan to rackmount your UCS C240 M5 server, you must order a tool-less rail kit.

## **STEP 12 MANAGEMENT CONFIGURATION (OPTIONAL)**

By default, the C240 M5 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Dedicated, select the UCSC-DLOM-01 PID shown in *Table 17*. In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. See *Chassis Rear View, page 7* for the location of the management port.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in *Table 17*. In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see

http://www.cisco.com/c/en/us/td/docs/unified\_computing/ucs/c/sw/gui/config/guide/2-0/b\_ Cisco\_UCS\_C-series\_GUI\_Configuration\_Guide\_201.pdf

UCSC-CCARD-01	Cisco Card Mode BIOS setting for C-Series Servers

In addition, the optional software PIDS listed in *Table 25* can be ordered for setting the server to operate in various modes.

## **STEP 13 SELECT SERVER BOOT MODE (OPTIONAL)**

By default, the C240 M5 server will ship with UEFI as the default boot mode. To have a server shipped with the Legacy BIOS mode (which was standard on M4 and previous generation servers), select the Legacy BIOS PID.

Table 18	Server	<b>Boot Mode</b>	Ordering	Information

## **STEP 14 ORDER SECURITY DEVICES (OPTIONAL)**

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in Table 19

#### Table 19 Security Devices

Product ID (PID)	PID Description
UCSX-TPM2-001	Trusted Platform Module 1.2 SPI-based for UCS Servers
UCSX-TPM2-002	Trusted Platform Module 2.0 for UCS servers
UCSC-INT-SW01 <sup>1</sup>	C220 M5 and C240 M5 Chassis Intrusion Switch

Notes:

1. Available later in CY20

**NOTE:** The TPM module used in this system conforms to TPM v1.2 and 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.

**NOTE:** TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

## **STEP 15 SELECT LOCKING SECURITY BEZEL (OPTIONAL)**

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from Table 20.

#### Table 20 Locking Bezel Option

Product ID (PID)		Description	
UCSC-BZL-C240M5	C240 M5 Security Bezel		

## STEP 16 ORDER CISCO SD CARD MODULE (OPTIONAL)

Order SD cards. See *Figure 5 on page 64* for the location of the SD cards. There are two locations, SD1 and SD2.

#### Table 21 128 GB Secure Digital (SD) Card (blank)

Product ID (PID)	PID Description
UCS-SD-128G	128 GB SD Card for UCS Servers
UCS-SD-64G-S	64 GB SD Card for UCS Servers
UCS-SD-32G-S	32 GB SD Card for UCS Servers

#### Caveats

- Install either one or two SD cards
- Do not mix SD card sizes
- You cannot mix SD cards with an internal M.2 SATA SSD (see ORDER M.2 SATA SSD (OPTIONAL), page 45).

## STEP 17 ORDER M.2 SATA SSD (OPTIONAL)

Order one or two matching capacity M.2 SATA SSDs as desired.

Product ID (PID)	PID Description
UCS-M2-240GB	240 GB M.2 SATA SSD
UCS-M2-960GB	960 GB M.2 SATA SSD

#### Caveats

■ Install either one or two M.2 SATA SSDs.

You cannot mix M.2 SATA SSDs with SD cards (see ORDER CISCO SD CARD MODULE (OPTIONAL), page 44).

■ When Ordering two M.2 devices with embedded software RAID with the UCSC-C240-M5S server PID, the maximum number of internal SATA drives supported is six. To-support greater than 6 internal drives a Cisco 12G Raid Controller or 12G SAS HBA must be ordered

## **STEP 18 ORDER INTERNAL MICRO-SD CARD MODULE (OPTIONAL)**

Order a 32 GB micro-SD card.

The micro-SD card serves as a dedicated local resource for utilities such as HUU. Images can be pulled from a files hare (NFS/CIFS) and uploaded to the cards for future use.

#### Table 23 32 GB Secure Digital (SD) Card (blank)

Product ID (PID)	PID Description
UCS-MSD-32G	32GB Micro-SD Card for UCS servers

#### Caveats

■ The microSD card mounts internally on riser 1 or riser 1B, so you must order either UCSC-PCI-1-C240M5 or UCSC-PCI-1B-C240M5 when you order a micro-SD card.

## **STEP 19 ORDER OPTIONAL USB 3.0 DRIVE**

You can order one optional USB 3.0 drive. The USB drive ordering information is listed in *Table 24*.

#### **UCS Drive Retention Service**

With the Cisco Unified Computing Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available)

**NOTE:** Cisco does not offer a certified drive destruction service as part of this service.

#### Local Language Technical Support for UCS

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

## **OPTIONAL STEP - ORDER RACK(s)**

The optional R42612 rack is available from Cisco for the C-Series servers, including the C240 M5 SFF server. This rack is a standard 19-inch rack and can be ordered with a variety of options, as listed in *Table 35*. Racks are shipped separately from the C240 M5 SFF server.

For more information about the R42612 rack, see RACKS, page 77.

Table 35 Racks and Rack Option
--------------------------------

Product ID (PID)	PID Description
RACK2-UCS	Cisco R42612 expansion rack, no side panels.
	This type of rack is used for multiple-rack deployments.
RACK2-UCS2	Cisco R42612 static (standard) rack, with side panels.
	This type of rack is used for single-rack and end of row deployments. Side panels are needed for racks at the ends of multiple-rack deployments. For example, when configuring a row of 5 racks, order 1 standard rack plus 4 expansion racks. Apply the side panels from the standard rack to the racks at each end of the row.
RACK-BLANK-001	Blanking panels (qty 12), 1U, plastic, toolless.
	Recommended to ensure proper airflow. Fill all empty RU spaces in the front of the rack. Because each blanking panel PID includes 12 panels, use the following calculation: 42RU - occupied RU = available RU. Divide available RU by 12 to determine PID order quantity.
RACK-CBLMGT-001	Cable mgt D rings (qty 10), metal.
	Use the D rings to bundle system cables to ensure proper airflow.
RACK-CBLMGT-003	Brush strip (qty 1), 1 U.
	The brush strip promotes proper airflow while allowing cables to be passed from the front to the rear of the rack.
RACK-CBLMGT-011	Cable mgt straps (qty 10), Velcro.
	Use the Velcro straps to bundle system cables to ensure proper airflow.
RACK-FASTEN-001	Mounting screws (qty 100), M6.
	The rack ships with nuts and screws, but extras may be ordered.
RACK-FASTEN-002	Cage nuts (qty 50), M6.
	The rack ships with nuts and screws, but extras may be ordered.
RACK2-JOIN-001	Rack joining kit.
	Use the kit to connect adjacent racks within a row. Order 1 unit less than the number of racks in the row.

For more information about the R42612 rack, see RACKS, page 77.

## **OPTIONAL STEP - ORDER PDU**

An optional power distribution unit (PDU) is available from Cisco for the C-Series rack servers. This PDU is available in a zero rack unit (RU) style or horizontal PDU style see Cisco RP-Series Rack and Rack PDU specification for more details at:

http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf

## **RAID Option ROM (OPROM) Settings**

The server contains an Option ROM (OPROM) for the PCIe slots. The server has a finite amount of option ROM with which it can boot up devices. Go into the BIOS and disable the OPROM on the PCIe slots not used for booting so that resources are available for the slots that are used for booting. An example OPROM BIOS screen is shown in *Figure 7*.

### RACKS

The Cisco R42612 rack is certified for Cisco UCS installation at customer sites and is suitable for the following equipment:

■ Cisco UCS C-Series and select Nexus switches

The rack is compatible with hardware designed for EIA-standard 19-inch racks. see Cisco RP-Series Rack and Rack PDU specification for more details at

http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf

### **PDUs**

Cisco RP Series Power Distribution Units (PDUs) offer power distribution with branch circuit protection.

Cisco RP Series PDU models distribute power to up to 42 outlets. The architecture organizes power distribution, simplifies cable management, and enables you to move, add, and change rack equipment without an electrician.

With a Cisco RP Series PDU in the rack, you can replace up to two dozen input power cords with just one. The fixed input cord connects to the power source from overhead or under-floor distribution. Your IT equipment is then powered by PDU outlets in the rack using short, easy-to-manage power cords.

The C-series severs accept the zero-rack-unit (ORU) or horizontal PDU. see Cisco RP-Series Rack and Rack PDU specification for more details at

http://www.cisco.com/c/dam/en/us/products/collateral/servers-unified-computing/r-series-racks/rack-pdu-specsheet.pdf

### **KVM CABLE**

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB 2.0 ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in Table 39.
