Asset monitoring

Monitor your multi-vendor infrastructure remotely with access to custom reports, visualizations, and real-time alerts.

Device management

Save time and reduce complexity by upgrading firmware on multiple APC or Schneider Electric devices at once using Network Management Card (NMC).

Reports and graphs

Create, save, and schedule user-defined reports for ease of data collection, distribution, and analysis.

Features and benefits of EcoStruxure™ IT Data Center Expert

Best-in-class data center monitoring and management solution with emphasis for on-premises monitoring and management to support our customers no matter where they are in their DCIM journey.

Unified On-Premises Monitoring

Monitor power, cooling, security, and environment from one secure, on-site platform, no cloud needed.

Real-time Alerts

Get instant, actionable alerts on your local network to quickly resolve issues and reduce downtime.

Local Data and Reporting

Generate custom reports and analyze trends with data stored safely on-site, stay compliant and in control.

Scalable, Flexible Deployment

Easily expand from one room to multiple locations with modular design and node-based licensing.

Secure Access

Access via web or local client with strong authentication and role-based permissions, no internet required.

Device Integration

Manage Schneider Electric and third-party devices with seamless integration into your existing systems.

Data Privacy and Compliance

Keep sensitive data on-site with advanced security and audit trails to meet strict regulatory standards.

Centralized and Secure Firmware Updates

Easily deploy and manage firmware updates across all connected Schneider Electric devices directly from your on-premises platform
