

## Anchor Plate with Cable Pass Thru

Secure more with more anchors.

K67934WW

### Product Description

Busy professionals often have a growing array of valuable accessories and devices on their desks, from laptops and tablets to external storage and specialized equipment. Many of these peripherals do not have built-in security slots, making them vulnerable to theft, jeopardizing sensitive data, and disrupting critical workflows when they go missing. The Anchor Plate offers an ideal solution, allowing you to extend the security of a Kensington Desktop & Peripherals Locking Kit to include a wider range of devices and equipment on your desk or workstation.

### Features

- Extends the security of Kensington Desktop & Peripherals Locking Kits
- Secures devices without a Kensington Security Slot
- Adheres firmly to flat surfaces
- Offers the same tamper-resistance, reliability, and durability as the locking kit
- Allows you to secure even more devices, including laptops, tablets, monitors, printers, scanners, docking stations, USB hubs, external hard drives, cameras, gaming consoles, and other accessories
