### Standard Features

#### Why HP Flash Media?

HP Flash media provides a high quality and reliability solution for virtualization environments where customers require a boot device and where performance is of utmost importance. There are many flash device choices on the market supporting all types of applications. The vast majorities of these devices are low grade MLC (Multilevel Cell) based and provide adequate low cost storage solution. HP Flash Media devices use highest industry flash technology that provides a higher level of performance and longer endurance characteristics than MLC. Each device undergoes rigorous performance testing, software validation and strict revision control to ensure the highest level of quality and reliability.

#### Read/Write Performance

HP Flash Media products offer superior performance with greater than 10+ MB/second Read Transfer Rate, and 5+ MB/second Write Transfer Rate.

#### Intelligent Provisioning

HP Intelligent Provisioning allows operating systems to be provisioned directly onto HP Flash Media kits, and can be done with just AUX power (using HP iLO's SPI connection). This allows easy deployment without powering on the server, and without any storage disks.

#### Power

A typical flash media device draws 1W versus 18W total power on 2 x 146GB SAS 10K SFF hard drives in a RAID configuration. Estimated yearly power expense savings versus 2 mechanical media hard disk drives is \$56 which means power savings alone will pay for the Flash Media device in about 16 months.
