Opengear Cellular Connectivity Services
Cellular connectivity simplified

Our cellular connectivity services complement Opengear's network resilience platform, and enable easy connection to our partners' award-winning global cellular networks.

Overview

Opengear delivers simple, cost-effective, and accelerated cellular connectivity services in over 170 countries worldwide.

Simple Cellular Connectivity
Avoid complex carrier contract negotiations, commitments, and lengthy implementation processes. All agreements are in place today. Our connectivity services are easy to activate and ready on day one.

Cost-effective Resolution
Cellular connectivity can be complex and expensive if not done right. Do not overpay for the connectivity you do not use, or pay extra (overage charges) for the services you need. We can help you right-size your connectivity services.

Accelerated Time to Value
Finding the right solution does take time. Implementing the right connectivity service can add from weeks to months to your deployment. Accelerate your time to connectivity. Receive an active SIM as early as two days and install it same day.

Peace of mind with Opengear Support
Leverage Opengear's knowledgeable technical support team for reliable and streamlined support.
