

# Kanguru Remote Management Console™ (KRMC)

## Standard Package

**Kanguru Remote Management Console™ (KRMC)™** is a powerful security application designed for remotely managing Kanguru Defender® hardware encrypted data storage devices. With the KRMC-Hosted **Standard Package**, an Administrator or Data Security Officer can monitor a variety of security aspects for Kanguru Defender encrypted devices belonging to their organization, creating a highly-secure data environment.

### The Standard Package includes:

- Remotely Enable & Disable Lost or Stolen Drives
- Strong Password Management
- Access Control Restrictions
- SSPM (Self Service Password Management)

**With the Standard Account, Administrators can access:**

### The Dashboard

The KRMC-Hosted Dashboard provides administrators with a comprehensive, visual overview of all connected devices and account information. It offers a quick snapshot of account details, a built-in license calculator, and any pending actions, streamlining the management process for greater efficiency.

### List of Devices

From the Devices menu, a complete list displays customizable details for all connected Defender Devices. Each device can be configured individually or globally and columns can be customized.

### Global Settings

The Global Settings can be used to configure the global security schematics for the account such as password requirements, timeout settings, and connection settings.

### Actions

The Actions menu provides a list of pending actions, successful actions, and failed actions.

New to KRMC? See this introduction to Kanguru's remote management platform:

### Practical Use Case

A KRMC-Hosted STANDARD Account is best for organizations that do not necessarily need to meet heavy government security regulations, but require strong security for their business. Organizations such as SMBs, Schools, and Non-Profits can benefit from the STANDARD KRMC-Hosted Account.

*Available in 1, 2, and 3-Year Packages.*
