Compact, quiet mono business printing

Fast, efficient, hassle-free business printing

Make everyday business printing simple with our desktop range of mono laser printers.

Simple to set up and easy to use, our compact mono laser business range quietly produces professional quality documents with minimal fuss.

Designed to improve productivity at work and at home, these devices are ideal as part of a managed print service (MPS) and have been expertly developed for a hassle-free printing experience.

Featuring the latest industry-standard security, alongside the flexibility to tailor each device to suit you and your business, you can be confident that this range meets the needs of the most demanding organisation.

Expertly engineered

Quiet and convenient

With its streamlined design, the range is engineered to print quietly whilst delivering fast print speeds. So you can print quickly and continuously without distraction.

Compact design

Ideal for placing under counters or in retail offices, every component has been expertly engineered and optimised to reduce the overall size of the device, whilst delivering exceptional quality without compromising on performance.
Built to last

With minimal maintenance and a robust and durable design you can be sure all our devices are ready to handle the demands of a busy workplace. This, alongside high-yield toners, means your business will be able to print for longer.

Low-energy consumption without compromise

Our innovative Planar Heating Element Technology (PHE)* enhances thermal efficiency within the device which minimises the energy required before printing.

This new technology delivers a 27.8% reduction in Typical Electricity Consumption (TEC) which leads to a shorter warm-up time, meaning the first page from sleep is printed in half the time.

*Available on multifunction devices

Secure by design

To keep pace with the ever-evolving legislation on privacy and data security, our devices offer the latest industry standard security features to securely protect your data.

At Brother we put print security first. Using triple-layer security at a network, device and document level, with a range of features that means data is only ever seen by those it is meant for.

With businesses shifting towards Zero Trust environments, we know that security is your highest priority. The evolving nature of security means that our security experts continuously research new enhancements to products, solutions and services to proactively ensure all our products are secure by design.

Our professional compact mono range provides business level security verified through external security certification, offering added peace of mind that your documents remain safe and secure. All devices come with a suite of security features and solutions that can be tailored to your business, enabling you to audit, control and manage your fleet of devices securely.

Security features and solutions that can be tailored to your business

Your device protects your business by reducing its attack surface through:

Restricting user access

By using LDAPS, Windows Active Directory together with NFC authentication, only authorised users are able to access the device.
Maintaining device integrity

With runtime intrusion detection, Secure Boot, digitally signed firmware and end-to-end encrypted connections, devices are always performing at their optimum level of security.

Restricting privileges at a device level

With Secure Function Lock and Setting Lock, only authorised users are permitted access to specific functions.

Your network is protected with flexible features and management tools including:

Intrusion protection

With protocol management, interface restrictions and IPV4 filtering, you have the flexibility to adapt to your business needs.

Secure connection

Securely connect to enterprise level wired and wireless networks through industry standard IEEE 802.1X.

Secure encrypted communication

By using flexible industry standards such as TLS, SSH, IPSEC, HTTPS and SNMP3, your business can tailor the device to its network.

Easily manage and configure your security profile

Apply settings to your fleet using BRAdmin Professional 4 and Mass Deployment Tool.

Audit your devices

Using SIEM integration through Syslog, you can gather real time usage information on your devices.

Your documents are protected through encryption, storage protection and secure print solutions including:

Encrypted document transfer

When you send your print data from your computer to the device, IPPS/HTTPS encryption ensures your data is secure and unreadable.

Secure data transfer

Whether you are scanning to your local network or over the internet via Web Connect or a cloud-based service, your data is protected using TLS, HTTPS, SFTP (SSH).

Non-persistent internal memory

All print job data is automatically wiped during a reboot and data is purged, ensuring no information is left on the device.

Secure print release

Using a Brother secure print solution, documents are only released when you are ready to print and collect them.

3rd party integration

Through Brother Solutions Interface (BSI), our devices can be fully integrated with trusted 3rd party partners such as Tungsten and YSoft, which adds an extra layer of security to your business.

Solutions ready

Automate workflows and improve business processes and security.

Brother offers a range of solutions for print, monitoring and analytics, and document workflow which can be added to multifunction devices. These provide additional professional features to improve your business processes.

You also have the option to further integrate your device with 3rd party software solutions including Tungsten Automation and YSoft.

Unlock new possibilities

Workflow Solutions

Automate workflows and improve business processes and security with print management solutions.

Upgrade your device with either Brother Product upgrades and 3rd party software solutions integrations from industry-leading providers such as Tungsten Automation or YSoft, giving you complete flexibility in how you manage, secure and control your documents.

Automatically route documents

Reduce the labour-intensive task of scanning several documents, saving and renaming them. Barcode Utility means that documents with a barcode can be scanned and automatically saved to the required location, automating the separation of a batch of documents and routing each individual file to the designated folder on your network.

Print Solutions

### Barcode printing

With Barcode Print+, simply supply your printer with the information for the barcode. The printed 2D and 3D barcode is easily read by a variety of barcode readers and scanners.

Secure Print release

SecurePrint+ enables you to print your confidential business documents securely. Your sensitive documents are only printed when you are ready to collect them from the printer. Only authorised staff can collect their documents and users are easily added and removed.
Monitoring and Analytics

Remote support

Remote Panel operates in real-time, offering a complete interactive interface to your printing device. Your IT provider can access the full functionality of your printer, to quickly diagnose and resolve any issues and enable settings to be changed as if they were physically standing at the device.

Order supplies from your printer

Effortlessly order your toner cartridge supplies with the Order Supplies service. In one touch, your selected supplier will be notified when you require replacement supplies and arrange delivery, ensuring you never run out of toner when you need it.

Automatic diagnostics

Use Request Help to send a diagnostic report via email to your IT administrator. Request Help enables your IT administrator or service provider to easily troubleshoot errors that may occur.

Brother makes printing simple for businesses.

Available as part of a managed print service (MPS) contract, each device in the range has been designed with MPS in mind.

We recognise what matters to you day-to-day. So, whatever your printing needs, we'll be "At your side" to find the solution that simplifies printer admin, saves time, keeps costs down, and helps you stay productive:

• Choose the package that suits your business or build a fully bespoke solution

• Automatic toner ordering and delivery before you run out

• Get up and running with a number of installation options, from remote set-up to enhanced onsite demonstrations built around you

• Customisable breakdown support

• Easy toner recycling - we offer a range of recycling services to help you meet your sustainability goals

• We work with you to make sure you are getting the most out of your investment with a service optimised to your needs

• Monitor your print usage, request support and change your service level in the Brother MPS customer portal

• Access to highly trained Brother experts at every stage of the process to make sure you are getting the optimal service and support throughout your MPS contract

Dedicated to remanufacturing and reducing CO$_2$

Our processes mean that 100% of the Brother cartridges you send back to us are remanufactured or recycled. Absolutely nothing goes to landfill and hasn't since 2013.

We are regularly investing in more sustainable products by working towards the circular economy principles of reduce, reuse, refurbish, repair and recycle with zero waste to landfill.

Dedicated carbon neutral remanufacturing facilities support our free cartridge return and recycle scheme. Every year, we remanufacture or recycle 3 million toner cartridges.

By remanufacturing 86% of our toner cartridges and each cartridge saving on average 33% of CO$_2$, we save around 4,500 tonnes of CO$_2$ each year. In doing this, we are able to support your company in reducing its carbon footprint and can provide you with an annual certifcate showing the amount of CO$_2$ you have saved when returning cartridges via the bulk returns scheme.

COOL EARTH

As well as our market-leading, carbon-neutral toner remanufacturing program, we have been partners with global charity, Cool Earth for well over a decade. A UK-based non-profit organization, Cool Earth helps protect endangered rainforest, combats against climate change and provides employment for local people.

Together, we have supported 7 communities across Papua New Guinea and the Peruvian Amazon in protecting around 70,000 hectares of rainforest from deforestation. As custodians of this land, these local communities have kept almost 27 million trees standing which absorb and store over 38 million tonnes of CO2 from the earth's atmosphere.
