¹ One Gigabyte (1GB) means 10⁹ = 1,000,000,000 bytes and One Terabyte (1TB) means 10¹² = 1,000,000,000,000 bytes using powers of 10. A computer operating system, however, reports storage capacity using powers of 2 for the definition of 1GB= 2³⁰ = 1,073,741,824 bytes and 1TB = 2⁴⁰ = 1,099,511,627,776 bytes, and therefore shows less storage capacity. Available storage capacity (including examples of various media files) will vary based on file size, formatting, settings, software and operating system and other factors.

² 5 Gbps is the maximum interface transfer rate per the specifications of the Universal Serial Bus 3.0. Actual transfer rate will vary depending on your system configuration and other factors.

³ Three (3) year standard limited warranty applies. For warranty in the Americas, see Terms preloaded on the hard drive or online at: <http://storage.toshiba.com/consumer-hdd/support/warranty-info>.

⁴ Compatibility may vary depending on user's hardware configuration and operating system.

⁵ Product specifications, features, configurations, colors, components, service, and availability are subject to change without notice.

⁶ Read and write speed may vary depending on the host device, read and write conditions, and file size.
