

**SHURE**

**VP83F** LENSHOPPER™ CAMERA-MOUNT CONDENSER MICROPHONE  
WITH INTEGRATED FLASH RECORDING

# WITHOUT GREAT SOUND IT'S ONLY HALF THE STORY.

Unless you're into second-rate sound, it's likely that your DSLR or HD camera isn't cutting it. It's also the reason for the LensHopper™ VP83F. Get ultra-clean, accurate audio steeped in almost a century of excellence. Add integrated micro-SD card recording, and up to 10 hours of capture time for your perfect partner device. Packaged into lightweight shotgun design with all-metal construction, you're sure to appreciate our legendary durability standards. Go anywhere audio never sounded so good.

## HOW IT WORKS

A mic that sounds so accurate and travels so well can only come from audio pros with major touring experience. This compact barrel mic has a supercardioid/lobal polar pattern for capturing only your intended sound source, with a wide frequency range for natural audio reproduction. Advanced user controls for headphone monitoring, low-cut filter, mic gain adjustments, track management and playback support are all intuitively accessed for uninterrupted control. As for quiet? We're less 'boomy' than you'd ever believe. Hear for yourself.

## WHY IT'S BETTER

### Sound pro perfection

Our audio pedigree has been thoroughly sound checked by legends. With the YouTubers catching on, it's time to up your audio game.

### Lose the noise

Built-in shock-absorbing Rycote® Lyre® suspension isolates vibration and mechanical noise. Stellar RF immunity eliminates unwanted audio artefacts from mobile phones and RF devices.

### SD card's a charm

You'll still record directly to your camera, but with an ace up your sleeve: micro SD card backup that never passes through the pre-amps in your camera.

### Form for function

VP83F components are the same as ones used by the pros, with plenty of power for marathon filming sessions. And all controls are positioned intuitively, which you'll appreciate by about hour two.

## QUALITY THAT'S IN THE DETAILS

- Digital flash memory with up to 32 GB micro SD card
- Ergonomic, five-position advanced control lever
- Real-time monitoring and detailed, illuminated LCD display
- Detachable 3.5 mm audio output cable
- Standard 1/4 inch (6 mm) thread mounting for camera or pedestal
